Derwent Abstract: (**JP08026906A**) Agrochemical formulation in the form of an emulsion in water comprises: (a) at least one agrochemical in an amt. of 1-675 g/l having m.pt. of upto 100 deg.C; (b) a plasticiser comprising rosin or a water insol. rosin deriv. in an amt. of 5-525 g/l; (c) a surfactant in an amt. of 40-200 g/l and (d) water in an amt. of 200g/l to make 1 l of the emulsion. The agrochemical is pref. acetanilide, benzoate, chlorinated hydrocarbons, hydroxybenzoinitrile, imidazole, nitroaniline, nitroxyline, organic phosphorus deriv., phenoxy-phenoxy-alkane carboxylic acid, pyrethroid or triazole.

USE/Advantage - Used as an emulsion in water type insecticide agent against insects e.g. *Bletilla germanica*. The gen prevents irritation and improves biological activity.

In an example, 210 g of melted endosulfan was mixed homogeneously with 190 g of 'Albalyn E' (RTM: methyl ester or rosin), 100 of 'Soprophor 14-R' (RTM: ethoxylated castor oil 60 EO), and 10 g of Epoxol 704 (epoxylated soybean oil Swift), 5 g of Aerosil COK 86 (RTM: fumed silicone) was dispersed in 475 g of deionised water by a homogeniser (Ultron Turox 45) and it was gradually added to the mixt. to give an emulsion. During the process, 1 g of 'Silicon AF 120' (RTM: defoaming agent) was added and the stirring speed was increased up to 10,000 rpm and the emulsion formation was completed in 15 mins.
